**NEW!**

## KETRON MIDJAY PLUS

**Midjay Plus** is the new expanded version of Midjay with a 64 MB Wavetable (twice the size of the standard version) this offers a new and remarkable variety of sounds (among them a stereo grand piano), drum sets and grooves.

Thanks to this new sound generation, **Midjay Plus** is able to faithfully reproduce both MIDI files and styles in a far more balanced and authentic manner. Increased Wavetable capacity has also given our technicians an opportunity to still further improve the voice section - the pre-selected sounds of the instrument - raising our trademark "Best Natural Sound" to an even higher standard.

The automatic style arrangement section has been considerably revised to include 140 new internal styles derived from the highly acclaimed Ketron SD5/SD3 series. **Midjay Plus** makes available the best unplugged, pop, swing, folk, Latin and ballroom accompaniments, not forgetting all the very best and latest dance styles which are currently exclusive to Ketron professional arrangers.

The DJ Loop has now been enriched with new "chill out", "lounge" and "dance" ambience sounds. **Midjay Plus** is also provided with a standard 80 GB hard disk where enormous quantities of music in WAV, MP3 and MIDI format can be saved and more importantly - played almost immediately.

The new display with a resolution of 320x240 pixel offers vastly improved browsing through the directories while a new contrast controller arranged on the front panel of the instrument enables you to adjust the display when working in less favourable conditions.

To get an even wider display, perhaps when using the Midjay for Karaoke events, **Midjay Plus** can be connected to a standard external VGA monitor. The new operating system has an optimised version of the standard 4.0 which considerably reduces start-up times and is ideally configured for use with Windows Vista and Mac OS X.

## MIDIJAY PLUS

### KETRON **AJAMSONIC** MIDIJAY PLUS UPGRADE

The **AJAMSONIC** package upgrade can be carried out on the following Ketron Products:- MS40, MS50, MS60, X1, X4, XD9, XD3, Vega, SD1, SD1Plus, SD3, SD5, Midijay and Midijay Plus series keyboards. This modification includes the following features not found on the standard models:-

- **New USB Port.** This USB port replaces the old Floppy Disk drive. Now you can be updated with the rest of the world in communication and transfer of data from/to your Ketron Product to/from your computer. Load data (Styles, User settings, Play Midifiles ... etc) faster and with ease now with USB sticks instead of old and outdated Floppy disks (which are very hard to find anyway). We recommend using USB sticks of 4GB or less.
- **Over 500 New Styles.** Enjoy new and interesting Styles including Gospel, Rock & Roll, Country, Salsa, Son, Reggae, Soca, Zouk, Makossa, Ndombolo, Highlife ... etc. Great styles with great feelings and true realism captured. Also comes with the KETRON Style library.
- **15 New Sounds (X-series, SD1/SD1Plus)** These new sounds (New Stereo Grand piano, Guitars with articulation, Sax with breath and valves effects ... etc, bring life to your SD1/SD1Plus. They are also used in conjunction with the factory sounds and your keyboard will sound like a new keyboard. Sounds are loaded when keyboard is turned on.
- **Over 100 Midifiles** Enjoy music like never before with a whole library of Midifiles by renown artists.
- **Over 100 MP3 Song files (Midijay/Midijay Plus)** These includes songs from the 60s, 70s, 80s of Dance, Latin, Ballroom, Folk, Country, African ... etc
- **BALANCED all styles.** Now, style volumes remain constant as you change from style to style. Great when performing live – sound man can ‘rest’ and not have to fidget with levels each time you switch from a style/song to another, even when switching between the various Arranger parts of the same styles.
- **Free Tune up.** Just as your car, your equipment needs occasional tune up from time to time. Have your unit checked, updated or upgraded where required.
- **BALANCED all Voices** so now, don’t be scared to switch from say a Sax to the Distorted guitar – all volumes are relatively even on all instruments.
- **New start up features and balanced DSP** for warmer natural sounds and also includes new Compressor settings, so your instrument sounds more ‘rich and full’.
- **New VOCALIZER Settings.** Now you can use vocalize with minimum feedback and basically no distortion on harmonized voices, thanks to the new algorithms included with this package!
- **New 1 year warrantee (\*).** This is valid only if we (or an authorized dealer) installs this package for you. This way, we can guarantee that the installation was done properly and to manufacturer’s specifications.

\* Warrantee on USB Drive when installed by us.
