

## KETRON EVENT PRO2 PACKAGE INSTALLATION INSTRUCTIONS

Congratulations on your purchase of the KETRON EVENT SERIES **AJAM PRO2** package. This unique package builds upon the PRO1 pack, but most of all, it factors in a lot of input from our customers (*for style, sound and content creation*), and it also takes advantage of the many '*less talked about but unique*' features the KETRON EVENT has to offer, especially with the release of the recent OS 3.0.0

---

### INSTALLATION STEPS

- **You must have installed OS3.0 or later before you can install this product.** Check your OS by pressing the **MENU** button and touching the **Preference** icon on your screen. Your OS should be displayed on the top of the screen – REL 3.x.x
- Insert an empty/clean USB Drive into your computer (*make sure this drive can be read by the EVENT instrument – you may want to test it before inserting it into your computer*).
- Download the zipped file **AJAM-PRO2-PACK.rar** sent to you via email link onto your desktop or computer drive (*not the USB drive*). If you purchased the HUNGARIAN STYLE PACK, this file will be called **AJAM-HUNGARIAN-PRO2-PACK.rar** or similar.
- Once downloaded, unzip the zipped file's contents onto the USB drive above.
- Depending on the package you purchased, you should have the following files and main folders in your new USB drive (*this example is for the ELITE Pro2 pack*):

AJAM-PRO2-SOUNDS-xxxxxxxxxxxx.ENC (System File where xx = your instrument's serial number)

AJAM-PRO2-STYLES-xxxxxxxxxxxx.ENC (System File where xx = your instrument's serial number)

AJAM-PRO2-ELITE-xxxxxxxxxxxx.ENC (System File where xx = your instrument's serial number)

AJAM-HUNGARIAN-PRO2a-xxxxxxxxxxxx.ENC (System File where xx = your instrument's serial number)

AJAM-INTERNATIONAL-PRO2a-xxxxxxxxxxxx.ENC (System File where xx = your instrument's serial number)

 MIDIFILES (Folder – Elite only)

 MultiTrack (Folder – Elite only)

 KEYTUNE (Folder – Elite only)

AjamSonic\_Final\_300.jpg (file)

INSTALLATION INSTRUCTIONS.pdf (file)

- Remove the USB drive from your computer and insert into the first USB slot on the EVENT instrument (*slot next to the USB host connector*), and wait about 5 seconds for the EVENT to ‘recognize’ it.
- Copy all these files and folders from the USB stick to the EVENT SSD drive (*root folder*) - except the “**AJAM-PRO2-SOUNDS, STYLES, xxxxxxxxxxxx.ENC and all the other files that end with .ENC**”. Do not copy into any folders or subfolders – these *must be copied into the root directory*).

Here is how to copy:

- i. Press the **MEDIA** button to display both the internal drive (USBACK), and USB drive.
- ii. Touch the **DISK EDIT** icon on the screen – then touch the USB drive to display the contents you want to copy from.
- iii. Using your finger tips, touch the folder icon to the left of the folder names to select/highlight the folders you want to copy - (MIDIFILES, MULTITRACK SURROUND), then touch the files AjamSonic\_Final\_300.jpg. As you select them, they are highlighted with a grey line. **DO NOT TOUCH THE “AJAM-PRO2-SOUNDS, STYLES, xxxxxxxxxxxx.ENC or any of the files ending in xxx.ENC”!** (*These are installation files that need to be installed separately as mentioned below*).
- iv. Touch the **COPY** icon below the screen and OK the next message to select where to copy the selected files to.
- v. The screen will once more display both drives.
- vi. Touch the KETRON drive (USBACK) to display the current contents of the EVENT instrument.
- vii. Touch the **PASTE** icon below the screen to start the copying process. This will take some time as the selected files and folders are copied over into your EVENT instrument.

**NB:-** *You can also achieve a quicker and more efficient result by connecting the EVENT to your computer via a USB printer cable, pressing MEDIA and touching PC CONNECT to establish a connection between the internal SSD drive of EVENT and your computer, and dragging the relevant files into the internal SSD drive of the EVENT.*

- When the COPY procedure is complete, press the **MEDIA** button to get the EVENT out of the MEDIA mode and back to normal operation (*the MEDIA light should be off*). If you had connected the EVENT to your computer via USB cable, touch PC connect to disconnect the EVENT’s SSD from your computer, then physically remove the USB cable and install the USB drive (*with the xxx.ENC files*) for the next step.
- These next steps will vary, depending on which package you purchased:
  - viii. Press the **MEDIA** button to access the media screen (*if not already there from completing the above procedure*).

- ix. Touch the USB drive icon on the screen to display all the contents of the USB drive which you unzipped from above.
  - x. Depending on how your File View settings are set up (PLAYER1 -SETTINGS – FILE VIEW), the files may be displayed before the folders or the folders maybe displayed before the files.
  - xi. Turn the wheel to scroll through the folders and files until you see the installation file **AJAM-PRO2-SOUNDS-lxxxx.ENC, AJAM-PRO2-STYLES-lxxx.ENC ...etc** (where the last 10 digits are your serial number you provided us).
  - xii.** Touch the file **AJAM-PRO2-SOUNDS-lxxxx.ENC** twice quickly, or highlight it, then press the **ENTER** button to start loading the relevant files and software. Installation can take between 30-60 minutes depending on the file selected so please be patient. **DO NOT POWER OFF THE INSTRUMENT UNDER ANY CIRCUMSTANCES!!!**
  - xiii. Repeat the above for all the other ENC files (AJAM-PRO2-STYLES ... etc) if applicable in your product.
  - xiv. When done, press the **EXIT** button and turn off the MEDIA button by pressing it to return to normal operations.
- **LOAD THE NEW DATA TABLE:** Press and hold down the Arranger buttons “A” & “B” – then while keeping them down, press the **ENTER** button to update the **MODELLING TABLE**. A brief message will be displayed showing this update.
  - **LOAD THE NEW SAMPLES (THIS STEP IS VALID ONLY IF YOU PURCHAED A PACKAGE WITH THE NEW SOUNDS):** You need to now manually load the new samples one time only into the SAMPLER that will be used by existing factory sounds and new User sounds. **(IF YOU ONLY PURCHASED THE NEW STYLES, YOU CAN SKIP THIS PART).**
    - NB:-** These new samples will replace any samples you had previously loaded into the SAMPLER, unless you simply load without clearing/formatting the sampler. If you load these in addition to your existing sounds, you may not have enough room for both sets of sounds. You can of course build a new sound bank [skb] library if there is more space available made up of both your samples and ours. THESE NEW SOUNDS WILL WORK ONLY IF YOU HAVE INSTALLED OS 3.0.0 or higher in your EVENT. IF you purchased the PRO1 package, go ahead and delete/format the sampler and load the Pro2 Sounds (as Pro1 sounds are also included in this package). These sounds will be stored in the Sampler’s memory and do not need to be installed again the next time the instrument is switched off and on.*
- Make sure your MEDIA button is off (from the above procedure).
  - Press the **MENU** button & touch the **AUDIO/SAMPLER** icon on the screen.
  - Touch **SAMPLER** to access the SAMPLER.
  - Touch the **UTILS** icon on the screen (Utilities)

- Touch **LOAD SKB** on the screen to display the list of current Sound libraries you have.
- Touch the **AJAM-PRO2BANK** file on the screen to start loading the new samples. This can take approximately 40 minutes. When done, a red bar will be displayed across the screen showing the amount of space used up (approximately 95%).
- Once the samples have completely loaded, press **EXIT** repeatedly 3 times or **MENU** to get out of the sampler.
- Turn off the EVENT and wait about 5 seconds before turning it back on.
- You can now start to enjoy the new Styles, Sounds and Backing track content.

Enjoy 😊
